

PLANTS

Today I need your help to learn about leaves from plants. Thank you

First of all can you all collect 8 leaves from plants, shrubs and trees at your place. Each leaf is to be from a different plant. Try and get leaves with

- Different colours
- Different shapes
- Different types of edges e.g. smooth or rough
- Different sizes

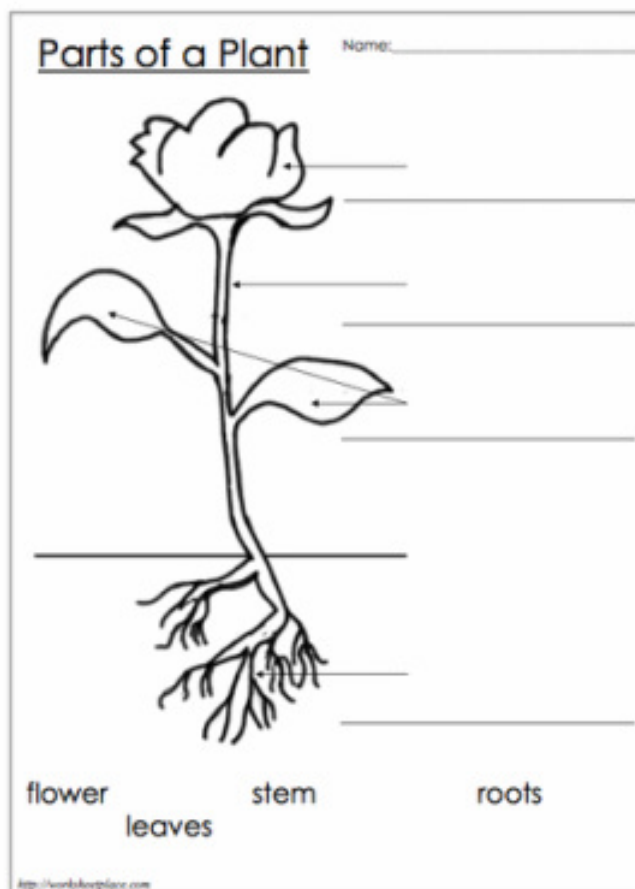

Great, thank you. Now I want to see you all make rubbings of these leaves. You will need a pencil, or crayon or pastel and 2 pieces of A4 paper.

Get Mum or Dad to click on the link below so you can see how to make plant rubbings.

https://www.google.com/search?client=firefox-b-d&q=plant+rubbings#kpvalbx=LgWAXtf_OOXG4-EPIaedyAg51

Now go and find your leaves and make your own rubbings. I look forward to seeing your artwork when we join up for a zoom meeting, then stick them on the fridge or on a wall.

Next task, see if you can complete the parts of a plant in the picture below

You did great, all the parts of the plant correct!

Did you know plants make seeds to make new plants? Some plants are awesome and make special seeds so they can move a long way by themselves. Watch the videoclip to see how the sycamore seeds travel. You may have a sycamore tree near you and can find sycamore seeds to try for yourself

Last job. Look at the picture below.

It is a stomata, but it looks like someone's lips. They let air in so the plants can make food for themselves and us. Your job – to draw a neat drawing of the stomata or 'lips'. Looking forward to seeing your pictures.
